PRODUKTPROFIL

Serafil 120/2
200/2

The Finest Ones
The Finest Ones

Serafil 120/2 200/2

100% Polyester Multifilament Thread

SERAFIL 120/2 and 200/2 are very fine sewing threads for high-quality trimming seams, for overlocking and blind stitching work.

At the same time, SERAFIL 120/2 is widely used in multi-needle quilting. The fine continuous polyester filaments combine high-strength with a filigree appearance.

SERAFIL 120/2 and 200/2 have an extremely fine thread cross-section

The high consistency and thread purity plus perfect finishing contribute greatly to excellent sewability.

SERAFIL 120/2 and 200/2 have optimum breaking resistance and abrasion resistance.

The fineness
The fineness

of SERAFIL 120/2 and 200/2 is ideally suited for top seam quality.

SERAFIL 120/2 is designed for very fine trimming seams, for a barely tangible secure edging and for all overlocking and blind stitching work. The use of SERAFIL 120/2 prevents seams leaving a mark on fabric during pressing.

SERAFIL 120/2 is at the same time a fine upper and lower thread on multi-needle machines for quilts, mattresses and quilted garments.

SERAFIL 200/2 is the even finer alternative for filigree trimming and high-quality blind stitching work on particularly lightweight fabrics.

The advantages

of SERAFIL 120/2 and 200/2 ensure:

-  Super-fine and super-soft seams
-  Optimum sewing dependability
-  Brilliant and silk-like appearance
-  Semi-transparent seams
-  Wide colour spectrum
-  Good colour adaptation
-  High fastness to light and washability
-  High bobbin running length
-  Economical large make-ups

Quality

The outstanding quality of SERAFIL 120/2 and 200/2 is based on the use of high-tenacity polyester filaments, optimally matched manufacturing processes and a specially developed finish. That – plus a painstaking quality assurance process – guarantees a consistently high standard in the final product. This high quality standard is the aim of the entire company. Amann is certified according to ISO 9001.

Ecology

SERAFIL 120/2 and 200/2 are manufactured with an eye to two aspects: top quality teamed with environmental compatibility. The production processes are geared towards high ecological standards. Eco-Text Standard 100 for these articles goes without saying.

Make-ups and needle recommendations

Tickets	Make-ups	Needle recommendations
SERAFIL 120/2	5.000 m king-spool 20.000 m king-spool Zeppelin-bobbins	Nm 70/80
SERAFIL 200/2	5.000 m king-spool 20.000 m king-spool	Nm 60/70

Depending on the material being sewn, the machine type and the seam position, the recommended needle rating may be higher or lower. For the multi-needle field we recommend the use of coarser needle Nm 100-130.
